

Does my student need any previous experience before taking this class?

No. If students have some experience with intro-level classes at their home school, such as Introduction to Engineering Design (IED), that is great; however, no experience is necessary.

Should I take this class or an AP class if I plan on going to college?

Taking both Advanced Placement (AP) and Career and Technical Education (CTE) courses in high school can provide students with a well-rounded education that prepares them for both college and career success. AP courses offer academic rigor, helping students develop critical thinking and analytical skills. CTE courses, on the other hand, provide hands-on, practical experience in specific career fields, giving students the chance to explore potential career paths and gain valuable technical skills. Combining both types of courses allows students to broaden their skill set, stand out in the college admissions process, and even qualify for various scholarships and earn dual credits. One is not better than another, just different.

If my student takes this course, should they go to college or go straight into the workforce?

College. This course is designed to prepare students to attend either a two-year or four-year college in the fields of architecture, engineering, interior design, manufacturing, construction, or surveying.

How much homework can a student expect from this course?

Given that most of the software and equipment are located within the classroom, students will not be assigned homework directly by the instructor most weeks. Instead, students will assign homework to themselves to ensure they make the most of their time and take advantage of classroom resources to complete the assigned projects.

Are there materials needed for the course?

Yes. Please see below for a typical list of required supplies and textbooks for the class.

Pens and/or pencils

(1) USB flash drive, minimum 16 GB (helpful, but not required)

(1) 1" three-ring binder

(2) Index Dividers (8-tabs)

(1) Pair of clear, plastic, anti-fog, ANSI Z87.1 certified safety glasses (may be purchased through instructor... approximately \$3.00)

Architectural chipboard, form core, and/or mat board (approximately \$12.00-\$20.00)

Miscellaneous project materials (approximately \$15.00)

Students need to come to class prepared with their subject binder, books, pencil, pen, and paper every day.

In addition to the above, students will be required to register and complete certification exams for the software covered in class. At this time, the cost of the certification exams is covered by the school corporation.

What software would be taught as part of this program?

Within the two years of the program, students will become familiar with and use the following software titles:

Autodesk AutoCAD (intermediate level)

Autodesk Revit (intermediate level)

Microsoft Excel (intermediate level)

SolidWorks (beginning level)

Adobe InDesign (beginner level)

Adobe Illustrator (beginner level)

Adobe Photoshop (beginner level)

Trimble SketchUp (intermediate level)

Is college dual credit available for this course? If so, is there a cost? How many credit hours are available? Is the college dual credit transferable to other colleges?

Yes. Depending on the prerequisites the student may have for the course, we are offering up to 21 hours of transcribed dual college credit through Ivy Tech Community College and five (5) transcribed dual college credits through the University of Southern Indiana. The cost for the dual credit is \$0.00. These college credits may be transferable to other colleges/universities.

In addition to the dual credits, students have the opportunity to earn and obtain five (6) industry-recognized certifications.

These include: Autodesk Certified User: AutoCAD, Autodesk Certified User: Revit, OSHA 10-Hour General Safety; SolidWorks CSWA, Microsoft Office Specialist: Excel, and the FAA Part 107 Remote Pilot Certificate.

If my student is undecided on what field of architecture or engineering to pursue in college, will this class help them decide?

Absolutely. We want to help students not only decide to go to college, but also to ensure that once they reach college, they have an understanding of their field of interest. During their time at the SICTC, students will work on several skills and be placed in scenarios aligned with fields related to engineering and architecture. We will also introduce problem-solving, design, and team-building skills during this time that translate to multiple fields of study. Through their experience, they will gain an understanding of careers and what it takes to be successful in college and beyond.
