

**Does my student need any previous experience before taking this class?**

No, absolutely not! The course starts off very basic and builds in complexity throughout each semester. It was specifically designed to provide a strong foundation for students with no prior knowledge or experience, and our instructors are dedicated to guiding every student. What we would recommend though is having decent typing skills, as this class relies heavily on knowing how to use the command line interface without the use of a mouse.

**If my student attends this course, should they go to college or straight to the workforce?**

Upon completing this course, your student will have valuable skills applicable to both college and the workforce. While students in cybersecurity can earn other certifications to help them fast-track into the workforce, we highly encourage and expect most of our students to attain a higher education at either a two-year or four-year institution.

**How much homework can a student expect from this course?**

Typically, students can expect at least one assignment per week. However, the majority of their grades are earned through long-term projects and exams that help test their knowledge, especially if they plan on taking any CompTIA certification exams in the future.

**What expenses will I incur? Fees, book rental or purchase, tool costs, etc?**

There are no costs associated with this course. All necessary materials are provided, ensuring that participation is accessible to every student. All that would be required is having a notebook and pen for taking notes in the class

**What is the job market for cybersecurity?**

Cybersecurity and related work is an exploding field, especially with the onset of Artificial Intelligence.. The job market for nearly all cybersecurity related work is expected to grow to meet the demand. Our course specifically focuses on learning the basics and defense in networking and cybersecurity fundamentals, understanding how to set up specific operating systems, and how to keep your network and devices secured on various network setups.

**What about college credits?**

We are pleased to offer six (6) hours of dual credits through Ivy Tech Community College. These valuable credits can be transferred to most four-year colleges within the state of Indiana, providing a fantastic head start for your student's higher education journey.

**Do I need to do well in Math and Science to excel in Cybersecurity?**

While strong math and science skills can certainly be beneficial, they are not absolutely required to excel in Cybersecurity. Cybersecurity is more about detective work, gaining an understanding of what you are working on and how to implement the best measures possible in a work environment. The biggest lesson you will learn in cybersecurity is just as soon as you secure one device, an exploit comes up and creates a new problem for you.
